Experience

Developer

February 2026 - Present

City of Calgary

Calgary, Alberta

- Automated structured data extraction from unstructured PDF/JPG forms, eliminating manual entry for 1000+ forms in 2 months, by building an AI-model-based parsing service integrated into an alerting pipeline
- Reduced manual data processing by 50+ hours by building a REST API pipeline to automate agreement reporting
- Designed and deployed an automated email distribution workflow using Outlook API to deliver communications to 2,000+ internal users, eliminating manual entry and reducing processing time by an estimated 40 hours

Software Engineer

May 2025 – August 2025

City of Calgary

Calgary, Alberta

- Reduced manual reporting effort across internal units by developing and optimizing SQL stored procedures and automated query workflows, achieving 100% test coverage with zero QA failures
- Eliminated manual water-temperature data collection for Water Services team, cutting processing time by 20 hours/week, by building a SQL-based Azure Logic Apps pipeline with Python to ingest and validate sensor data

Data Scientist

April 2024 – May 2025

Dell Technologies

Toronto, Ontario

- Developed 15+ production ETL pipelines using Python, SQL, and Pandas to clean, transform, and engineer features from large-scale NBA datasets for machine learning applications
- Built and evaluated 20+ machine learning models for NBA game outcomes, applying feature selection, model tuning, and cross-validation to improve predictive performance
- Tasked with optimizing API endpoints using asynchronous Python and FastAPI, improving concurrent data retrieval by 35% for ML workflows

Data Scientist

May 2023 – April 2024

Cybera

Calgary, Alberta

- Built NLP data pipelines to power government voting analytics, integrating 10+ external APIs and automating data extraction in Python using BeautifulSoup
- Achieved 93% prediction accuracy for Alberta water levels by developing KNN and linear regression models, packaged as reusable, production-ready Python modules

Projects

"Facebook" Clone Web App | Django, Heroku, Python, JavaScript, CSS, HTML, Swagger

- Implemented RESTful APIs enabling interaction between nodes on separate Heroku instances, supporting dynamic distribution of content across a federated network
- Achieved 100% unit and integration test coverage for API endpoints using Swagger/OpenAPI-driven tests, improving reliability and regression safety
- Built front-end interfaces for profile, stream, and post views using JavaScript, HTML/CSS, and AJAX for dynamic content updates

AI Gym Exercise App | Python, Streamlit, Mediapipe, OpenCV, Numpy

- Developed a real-time computer vision exercise tracking system by applying MediaPipe pose estimation and OpenCV to identify body landmarks and calculate joint angles for automated form analysis
- Implemented geometry-based exercise recognition by processing joint-angle relationships with NumPy, enabling real-time repetition counting and form feedback across multiple exercises

Technical Skills

Languages/Frameworks: Python, JavaScript, TypeScript, Java, C++, C#, SQL, React, Node.js, Next.js, Express, .NET, FastAPI, Django, Spring Boot

Libraries/Technologies: Docker, Azure, AWS, Git, PostgreSQL, MySQL, MongoDB, Postman, Requests, Swagger, Power Automate, Power Apps, Firebase

Education

University of Alberta

Bachelor of Science in Computer Science

2025

Edmonton, Alberta
